

STATUS

Degree assessed by the **ZAB** as equivalent to a German Master's-level degree, i.e. **Fachkraft mit akademischer Ausbildung** (§ 18 Abs. 3 AufenthG). Eligible for the **EU Blue Card** (§ 18g) and the accelerated skilled-worker procedure (§ 81a). Verfügbar ab sofort · Kündigungsfrist 2 Monat.

PROFILE

Python developer with 4 years of backend, automation and tooling experience in the automotive sector, now moving into AI engineering. I build internal tools end to end, from Python services and data workflows through to responsive web frontends, and have migrated legacy desktop and CLI tools into modern web apps. Currently building LLM systems with RAG pipelines, OpenAI/Claude integration, vector databases and multi-agent architectures.

WORK EXPERIENCE

- 09.2023 – Present

Python Developer / Tools Engineer & Consultant

ALTEN Maroc → Stellantis · Rabat, Morocco (hybrid)

  - Designed and shipped **production RAG systems** end to end: document ingestion, chunking, embedding generation and vector search (FAISS, Chroma), exposed through **FastAPI** services with authentication, token streaming and monitoring, backed by the OpenAI and Claude APIs.
  - Built the **data layer feeding those systems**: ingestion from REST APIs, Excel and CSV, schema validation, and structured output generation, with automated data-quality checks ensuring reliable retrieval inputs.
  - Delivered **15+ Python services and internal tools** adopted across engineering teams, and packaged reusable libraries published to **Artifactory**, reducing duplicated work and cutting manual processing time.
  - Modernised legacy desktop and CLI tooling into responsive **React** web applications (JavaScript, Tailwind CSS, Bootstrap), making engineering workflows self-service.
  - Ran the full delivery path in an enterprise environment: **Docker**, **AWS**, **CI/CD** (Git, TeamCity), and secure key distribution (RSA-2048 + AES-256-GCM over TLS) for regulated automotive data, in Agile/Scrum with French and Brazilian teams.
- 07.2022 – 07.2023

Full-Stack Python Developer

Conexcap Technology → 570easi · Marrakesch, Morocco (remote)

  - Built backend data flows, SQL queries and **REST endpoints** for a production **FinTech** platform serving live customer traffic.
  - Worked across the stack, implementing frontend features against those endpoints and keeping the API contract consistent on both sides.
  - Implemented data validation and **automated tests**, catching regressions before they reached production.
  - Diagnosed and resolved live production incidents through log analysis and database debugging, tracing issues from user report to root cause.

SKILLS

|          |                                                                                                                        |
|----------|------------------------------------------------------------------------------------------------------------------------|
| AI / LLM | OpenAI & Claude APIs, RAG, LangChain, LangGraph, embeddings, FAISS, pgvector, multi-agent systems, LLM evaluation, MCP |
| Backend  | Python, FastAPI, Flask, Django, REST APIs, async, Celery, Redis, SQL, PostgreSQL, Elasticsearch, ETL                   |
| Frontend | React, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap, responsive design, REST/async UI integration           |
| DevOps   | Docker, Git, TeamCity (CI/CD), Bash, Linux, AWS (EC2, S3, Lambda, IAM), gunicorn, mTLS/TLS, PKI                        |
| Sprachen | Arabic (native) · English (fluent) · German (A2, targeting B2)                                                         |

EDUCATION

- 2020 – 2022 **M.Sc. Information Systems Engineering** · Cadi Ayyad University, Marrakesch
- 2016 – 2020 **B.Sc. Software Engineering** · Moulay Ismail University, Errachidia
- 2016 **High School Diploma in Mathematics** · Sidi Ahmed Benaceur High School, Zagora
